

Tarunika Vijayakumar

NETWORK ENGINEER

2 years of ISP experience in managing and optimizing network infrastructures, with hands-on expertise in Cisco, Juniper, and Drivenets technologies. Skilled in routing, switching, troubleshooting, and network monitoring, with a strong problem-solving mindset. Also interested in exploring broader areas within IT, including software development, and open to learning new technologies and adapting to different technical roles.

EDUCATION

M.Sc. Information & Communication Engineering

Technische Universität Darmstadt
10/2025 – Present Darmstadt, Germany

B.E. Electronics & Communication Engineering

St. Joseph's College of Engineering
08/2019 – 04/2023 Chennai, India

WORK EXPERIENCE

Network Engineer – Platform Planning & Design

Tata Communications Limited
07/2023 – 09/2025 Chennai, India

- Monitored port health across the International IP network; raised BOQs for cards and optics to prevent crunch.
- Led strategic planning and design for new IP/IPT POP implementations across APAC, NA, and EU regions.
- Drove legacy device decommissions (Cisco/Juniper to Drivenets) and coordinated production rollouts.
- Configured and tested site-to-site IPsec VPN tunnels between TATA and customer CPEs for IZO service.

CERTIFICATIONS

- JNCIA – Juniper Networks Certified Associate
- Nokia BNG Training
- CCNA Routing & Switching 200-301 (In Progress)
- AWS Cloud Practitioner (In Progress)

ACHIEVEMENTS

Certificate of Excellence – Ownership & Collaboration (09/2024)

Coordinated Tencent POC (USD 1.2–5.4M) across 5 cities in under 5 days

Certificate of Excellence – Growth Mindset & Agility (10/2024)

Delivered 20+ ports to Tencent Customer within a single month

Co-author: Basics and Advanced C Programming

Published on Amazon Kindle

TECHNICAL SKILLS

Protocols

BGP, OSPF, ISIS, MPLS, TCP/IP, VPN (IPsec, GRE)

Switching

STP, VLAN, 802.1q, VTP, Ether Channels

Hardware

Cisco NCS55A1, Juniper MX960/MX480, Drivenets NCP3/NCP Lite

Network Security

IPsec, GRE, NAT/PAT, ACL

Tools & Platforms

Python, IBM Cloud, InfluxDB, Grafana, REST APIs

PROJECTS

Botnet Detection via ML (BE Thesis)

- Anomaly detection in Python to classify botnet traffic in real-world network datasets.

Diabetes Prediction

- Supervised learning pipeline for pattern detection in clinical healthcare data.

Real-Time News Tracker (IBM Cloud)

- Integrated REST APIs and IBM Cloud services for live news ingestion.

LEO Satellite Network Performance Measurement Tool

- Designed a distributed monitoring system to evaluate network performance across multiple locations.
- Built a real-time dashboard using InfluxDB and Grafana for performance visualization and analysis.
